

# DNS Setup Instructions

Configuring [www.flasherfleetsolutions.com](http://www.flasherfleetsolutions.com) for GitHub Pages

## Overview

This guide will help you configure DNS records in Squarespace to point [www.flasherfleetsolutions.com](http://www.flasherfleetsolutions.com) to your GitHub Pages website.

## Step 1: Access Squarespace DNS Settings

1. Log into your Squarespace account at [domains.squarespace.com](https://domains.squarespace.com)
2. Click on **flasherfleetsolutions.com**
3. Click **DNS** in the left sidebar
4. Click **DNS Settings**

## Step 2: Add A Records (4 Records Required)

Add these four A records. These point your root domain to GitHub's servers.

Type	Host	Points To	TTL
A	@	185.199.108.153	3600
A	@	185.199.109.153	3600
A	@	185.199.110.153	3600
A	@	185.199.111.153	3600

## Step 3: Add CNAME Record

Add this CNAME record. This points [www](http://www) to GitHub Pages.

Type	Host	Points To	TTL
CNAME	www	mingagent.github.io	3600

**Note:** If you see existing A records for @ or a CNAME for www, delete them first before adding the new records.

## Step 4: Configure GitHub Pages

After DNS records are saved:

1. Go to: [github.com/MingAgent/flasher-fleet-solutions/settings/pages](https://github.com/MingAgent/flasher-fleet-solutions/settings/pages)
2. Under **Custom domain**, enter: **www.flasherfleetsolutions.com**
3. Click **Save**
4. Wait for DNS check to pass (green checkmark)
5. Check the box for **Enforce HTTPS**

## Timeline

DNS changes can take **24-48 hours** to fully propagate worldwide. During this time, the site may work intermittently.

## Summary of All Records

Type	Host	Points To
A	@	185.199.108.153
A	@	185.199.109.153
A	@	185.199.110.153
A	@	185.199.111.153
CNAME	www	mingagent.github.io

## Final Result

Once configured, the site will be accessible at:

**<https://www.flasherfleetsolutions.com>**

<https://flasherfleetsolutions.com> (redirects to www)
